Personal Profile

Data engineering aspirant with one year of enterprise experience operating an end-to-end data pipeline — from SQL-based extraction and Python automation to Excel reporting and Java-powered internal distribution — at a U.S.-based manufacturing firm. Leveraged this workflow to track production losses, detect process bottlenecks, and optimize parts pre-ordering, while also developing cross-cultural communication skills through a customer-facing role at Shinhan Bank. Motivated to architect scalable, high-performance data infrastructure for the Fintech industry through graduate study in Data Engineering

Education

SoonChunHyang University

Asan, South Korea

Bachelor of Science in Internet of Things. GPA [3.62/4.5]

Aug 2026

Thesis : 'AI-Powered Parenting Solution: Cuddle Doll'

Relevant Coursework: Data Structure, Computer Algorithms, Operating System, Computer Networks, Basics of Data Analysis, Machine Learning, Deep Learning, Artificial intelligence, Probability and Statistics, Advanced Engineering Mathematics.

Experience

HDI

Richardson, TX

IT Intern

Jul 2024 – Jul 2025

- Extracted and analyzed large-scale operational datasets using Microsoft SQL Server to monitor production loss and detect process bottlenecks, facilitating data-driven decision-making for parts pre-ordering.
 - Engineered Python automation scripts to streamline repetitive data processing workflows, significantly accelerating the reporting cycle efficiency for cross-functional operational teams.
 - Synthesized complex analytical findings into structured Excel reports and managed enterprise-wide distribution via a Java-based internal system, ensuring data integrity and accessibility.
- OCTA Part Regeneration Rate Improvement Project
- Established a new data generation framework for OCTA part regeneration by conducting on-site line inspections and performing cross-process SQL analysis, quantifying a 1.59% baseline recovery rate.
 - Diagnosed critical loss drivers, identifying a 40% judgment error rate and a 26% production loss stemming from process bottlenecks that caused 43% of total delays.
 - Optimized workforce allocation and implemented additional scan points, reducing judgment errors by 60% (40% → 16%) and bottleneck-related loss by 35% within three months.
- SIM Card Management & System Optimization
- Designed and deployed a standardized SIM card checklist system and a Java-based data input interface, enabling structured data management and real-time tracking.
 - Achieved a 56% reduction in management time and an 87% decrease in operational loss through systematic process redesign and automated data entry workflows.

Shinhan Bank

Asan, South Korea

Banking Assistant (Part-time)

Jan 2023 – Jun 2024

- Facilitated complex banking procedures and teller operations for a high-volume international clientele, conducting bilingual consultations in English and Korean to ensure seamless service delivery.

- Streamlined document preparation processes for international students and foreign workers, leveraging cross-cultural communication skills to navigate diverse financial regulations and requirements.
- Curated and disseminated daily financial news summaries and market insights via university networks, promoting financial literacy and fostering knowledge-sharing discussions among team members.

Deep.I

Data Labeling Specialist (Part-time)

Asan, South Korea

Jun 2022 – Dec 2022

- Annotated hundreds of high-resolution satellite imagery datasets using proprietary labeling platforms to support the development of defense-grade AI recognition models.
- Engineered automated data crawling and collection pipelines to aggregate diverse text and image datasets, significantly expanding training data availability for machine learning workflows.
- Executed systematic quality assurance (QA) reviews on large-scale annotated batches, ensuring data integrity and label consistency for high-precision model training.

Leadership & Activities

Capstone Design

Project Leader

Asan, South Korea

Sep 2023 – Jun 2024

- Led a cross-functional team of 4 to develop 'Cuddle Doll,' an AI-integrated emotional support platform designed to facilitate parent-child communication.
- Architected and trained a deep learning-based emotion analysis model using Python and PyTorch, processing unstructured conversational data to derive actionable psychological insights.
- Developed a personalized book recommendation algorithm based on emotion analysis results, integrating RaspberryPi for IoT-based data collection and real-time processing.
- Synthesized user behavioral data and sentiment scores to optimize the recommendation engine, ensuring delivery of age-appropriate and emotionally relevant content.

University Student Council

Director of Accounting (Promoted from Staff)

Asan, South Korea

Mar 2021 – Dec 2023

- Managed departmental budgets and administrative workflows for 3 consecutive years, overseeing the transition from manual record-keeping to digital tracking systems.
- Supervised a team of staff members to coordinate large-scale university events, ensuring operational efficiency and fiscal transparency.

Freshman Mentoring Program

Lead Mentor

Asan, South Korea

Mar 2022 – Dec 2023

- Guided 50 incoming students through academic and social transitions over 2 years, conducting regular one-on-one consultations to support student retention and satisfaction.

Bucheon Braille Library

Volunteer Data Typist

Bucheon, South Korea

Jan 2023 – Present

- Transcribed printed literature into digital braille formats, ensuring 100% data accuracy to facilitate information accessibility for the visually impaired.
- Managed large-scale text conversion projects, maintaining consistent formatting and linguistic integrity across diverse academic and literary materials.

Awards & Certifications

Bronze Award, SW Idea Contest, SoonChunHyang University

Nov 2023

IBM Data Engineering Certificate, Coursera

Oct 2025

Skills & Interests

Technical: Python, SQL, Java, R, C/C++

Tool & Platforms: Microsoft SQL Server, AWS, Tableau, Advanced Excel

Data Skills: Data Labeling, Data Collection, Data Pipeline Design

Language: Korean (Native), English (Professional Working Proficiency)

Interests: Swimming, Violin
